Project Submitted in Partial Contentment of the Requirements for the Degree of

BACHELOR OF SCIENCE

IN

COMPUTER SCIENCE

Department of Computer Science and Information Technology

Government Graduate College Samanabad Faisalabad

2021

CERTIFICATE

This is to certify that ***Member-1 and Member-2*** bearing Registration No. ***20xx-GCUF- xxxxx and 20xxx-GCUF-xxxx*** has completed the final project titled as ***"E-Education System"*** at the **Department of Computer Science**, **Govt. Graduate College Samanabad Faisalabad**, to fulfill the partial requirement for the degree of ***BS - CS***.

DECLARATION

The work reported in this project was carried by me under the supervision of **Project Supervisor, *Sir XYZ*,** at **Government Graduate College Samanabad Faisalabad**.

I hereby declare that this project and the contents of project **"E - Education System"** are the product of my own research and no part has been copied from any other written or published source (accept the references, standard mathematical or genetics models / equation / formulas / protocol etc.).

I further declare that this work has not been submitted for award of any other degree / diploma.

The institution may take action if the information provided is found inaccurate at any stage.

Member # 1 : abc
Registration No. : *20xx-GCUF-xxxxx*

Member # 2 : xyz
Registration No. : *20xx-GCUF-xxxx*

ACKNOWLEDGEMENT

First of all, I thanks to **ALLAH,** the most merciful and most beneficent who give me talent to complete this project successfully then I consider it may utmost duty to express gratitude and respect to **Holy Prophet (SAW)**, who is an everlasting torch of guidance for humanity as a whole we are obliged to my parent and family members whose prayers have enabled me to reach to this stage at this occasion.

It would not have been possible without the kind support and help of many individuals and institute. I would like to extend my sincere thanks to all of them.

I would like to express my special thanks to my parents whose support and encouraged me during the graduation.

I would like to express my special gratitude and thanks to our supervisor **Muhammad Alim** and Co-Supervisor **Supervisor's name** for their guidance and constant supervision as well as for providing necessary information regarding the project & also for their support in completing the project. I would like to express my gratitude towards my parents for their kind co-operation and encouragement which help me in completion of this project.

Lastly I also acknowledge **Sir Khalid Mahmood** for the assistance and guidance he offered toward development of the project.

ABSTRACT

E-Education System (SMS) is a web enabled application developed in **PHP** and powerful **MYSQLI** database backend. To implement **E-Education**, schools do not require expensive hardware and software, all schools need is internet connection and desktops. Our system works as a centralized database and application that schools can easily access the system from anywhere based on the login credentials. E-School is a platform independent system that virtually any user can access from anywhere through a standard internet accessible system. We can also customize E-School for individual school needs. Administrators: School Management System helps administrators get the most accurate information to make more effective decisions. Teachers and administrators gain time saving administrative tools, parents gain immediate access to their children's grades and students can track their own progress. School Management System equipped features makes it possible to generate schedules and reports in minutes and to retrieve attendance records, grade checks, report cards, transcripts, and form letters in just a few clicks.

Teachers: School Management Systems helps Teachers to complete grade book, track student's attendance, input class notes, create lesson plans and detailed reports. Communicate with other staff members, students, and parents all via e-mail. Students: School Management Systems helps Students to access assignments and tests. View attendance records, grades, report cards, and progress reports all online. Students also can communicate through mail and forums with teachers and students online.

Chapter 1 INTRODUCTION

When you ask the school to enter the electronic world in which he asked to electronic advantages make you processions electronic era which has become all the world is in it and that makes you continuously with students and teachers quickly Here you require a Website so that this site covers the needs of teachers and students at one time s that it is Students special site where watching the monthly marks obtained at the school and also can request permission in the case not to go to school and that teacher who can put signs and writes reports on each student activity, duties and violin can be to the director of the school that is watching all the students and teachers in terms of absence and attendance and also can see that all the observations and monitors all complaints and reports and so in a short time and quickly. Hence, we can say that this site facilitates all administrative tasks within and outside the school with ease.

Now a day, education is getting smarter with the influence of technology. Every passing day we came across another new technology. Schools are now trying to reduce their manual work and are upgrading to automated ones. Some of the schools started using ERP system for making their work easier. The **Online School Management System** is somehow advanced and a complete model to manage all the school activities. The **E Education System** are intellectual and user-friendly. It helps manage a huge administration task along with data and records of teachers, staffs, students and their parents. The schools are also looking forward to developing and adapting the school management software which will help them in turning out to be the brand.

Advanced E Education Systems, Open source school management, PHP based School Application, School Administration & Management software, School Management software, SMS. E-Education System is a complete school information management solution. Today's schools need to manage more information than ever before. Without a solid internal infrastructure for teachers, administrators and departments to share data, critical school and student information can be lost, or worse leading to a host of problems that can effect of a school's image and endurance.

To remain competitive, school needs a simple solution that can run individual function, connect their entire operation, use the web as a key communication tool and simplify day to day operational responsibilities, giving staff more time with students.

E-Education System automates various scheduling activities of school and optimizes the use of premium resources. Concerned authorities can now easily and seamlessly use the system to create timetables, otherwise a time consuming and tedious task.

1.1 Purpose of E Education

E-Education isn't a new concept; it's something that has been around for a couple of decades now, but it's still not as widespread as you might think. Courses taught at school and in the workplace are still predominantly undertaken in person, and led by a tutor or teacher. Being taught in person by a tutor does of course has its own benefits, but e-learning is an option that businesses are increasingly recognizing as one that brings lots of upsides. In this article, we're going to consider the purpose of e-learning and why businesses and other organizations choose to use it.

1.1.1 Flexibility:

The flexibility of e-education is one of the reasons that businesses often prefer it over more traditional teaching methods. Sending out team members for training can sometimes take several days, which can be a significant loss of productivity to the business. The nature of e-learning courses usually means that anyone can sit down and tackle a chunk at a time. This is perfect for those who want to spread out their learning, particularly when they want to learn during work time, but when the normal demands of the job are lower. Also on the subject of flexibility is the breadth of courses on offer - many training providers offer dozens of courses from lots of different accreditation bodies, which means that e-learning technology can be used for nearly any subject.

1.1.2 Interactivity:

When e-education was first popularized back in the early 90s, one of its biggest attractions was the interactivity it brought, compared with pouring over books and paperwork. This was especially attractive for children, because education material could be made more fun and enjoyable, and in many ways gamified. Now, this is a standard part of many e-learning courses. Learners can study vibrant and interesting material supported with images, animations and more, much of which can

be interacted with, particularly when it comes to quizzes and assessing knowledge. The idea of this interactivity is that it keeps people engaged, ultimately ensuring that they learn more effectively.

1.1.3 Reducing cost:

Many of the above points contribute to one factor that businesses in particular will like. And that's that e-learning is often a very cost-effective option, versus other types of course delivery. We've already mentioned the fact that e-learning can be done in-office during periods of downtime, and this avoids the costly expense of having members of staff out on training courses, both in terms of travel and lost productivity. The course fees themselves are often lower too, with e-learning providers not having the same outlay on staff. It is of course always important to compare options however.

1.1.4 Gathering data:

Paperwork is both a hassle to manage, and not particularly effective when it comes to understanding data. Fortunately, e-learning goes a long way in remedying this. In most cases, an e-learning course will be delivered through a learning management system, or LMS, which is the e-learning software that enables the course to run. These usually come with the ability to thoroughly track information pertaining to learners and courses, which means that business leaders can very easily see how all users are progressing with course material, who has completed what, and who might need to retake lapsed certifications. Rather than having to sift through unconnected documents, all relevant information can be housed in one place.

To conclude, e-learning is all about helping businesses and other organizations to have more control over how their learners take and complete courses and certifications. It's a flexible, cost-effective way of learning, and when utilized properly, it can be a very powerful business tool too.

1.2 How it works?

E-Education System is a complete school information management solution. Today's schools need to manage more information than ever before. Without a solid internal infrastructure for teachers, administrators and departments to share data, critical school and student information can be lost, or worse leading to a host of problems that can effect of a school's image and endurance. To remain competitive, school needs a simple solution that can run individual function, connect their entire operation, use the web as a key communication tool and simplify day to day operational responsibilities, giving staff more time with students.

E-Education System automates various scheduling activities of school and optimizes the use of premium resources. Concerned authorities can now easily and seamlessly use the system to create timetables, otherwise a time consuming and tedious task.

1.2.1 E-Education for Management

- Single points school management software
- Manage multiple campuses.
- Enable internet front-end for the school.
- Connect with Parents and other stakeholders effectively
- Build and Manage community of parents, teachers and students
- Manages all administrative records with zero redundancy
- Achieve best possible resource optimization
- Automate all operational functions like Attendance, Exam Management.
- Automatic generation and regeneration of timetable with dynamic substitute management.

1.2.2 E- Education for Teacher

- Complete attendance automation.
- Complete marks/grade management
- Publish articles for others.
- Interact with parents efficiently and effectively.
- View analytical reports
- Email and Internal messaging system.
- Participate in forum and share knowledge with others.
- View own attendance.
- View Timetable in advance

1.2.3 E- Education for Student

- Get latest updates about school through image Gallery, News etc.
- Share knowledge and views with other parents and school through various features like article and forums.
- Get connected with schools effectively and easily
- Interact with teachers through internal messaging system.
- know status about her child through attendance, marks etc.

1.2.4 E- Education for Parent

- Get latest updates about school through image Gallery, News etc…
- Share knowledge and views with other parents and school through various features like article and forums.
- Get connected with schools effectively and easily
- Interact with teachers through internal messaging system.
- Know status about her child through attendance, marks etc ...

1.3 Project Scope

E Education System is intended to help the any institute that wants to store their students and management records into the computer. Our software is specially designed for an educational institute (Schools and Colleges). Our SMS software will fulfill all the requirement of a school and college. It will store all the personal and academic information of the students. It will also store the fee information of the students. Management will get information of any student who studied/studying in this institute till now easily. This software will also help the management to store their Employees information including their personal information and salary information. It also b useful to take class online, provide homework and notes through it. Take Exam online is also providing to schools and college. Result generated automatically. Major advantage of this software is that parents are also be a part of this system, parents can keep an eye on their student's study

1.4 Project Planning

The purpose of this ***E Education System*** is to provide a simple solution to manage the overall school or college through a website. The admin can manage the overall record. This project is supported by **Ifra Mubarik** and all my CS staff Members has supported us in fulfilling the task of this project. They did motivate us to do this project.

We completed this project almost within 5 months, there were 4 main phases

- Designing
- Coding
- Implementation
- Testing

1.5 Project modules

Project is based on 9 (Nine) modules:

- Assignment Management Module: Used for managing the Assignment details.
- Question Module: Used for managing the details of Question
- Class Module: Used for managing the details of Class
- Student Management Module: Used for managing the information and details of the students.
- Teacher Module: Used for managing the Teacher details.
- Parent Module: Used for managing the information and details of the parents.
- Quiz Module: Used for managing the Quiz Information.
- Login Module: Used for managing the login details.
- Attendance Module: Used for managing the information of students and staff Attendance

Chapter 2 BACKGROUND & PROBLEM DEFINITION

2.1 Background Research

Back then, it was sparsely used, mostly by business executives and few postsecondary institutions. But today, it's become a cornerstone of education – and it preserved school during **Covid-19** pandemic.

When you ask the school to enter the electronic world in which he asked to electronic advantages make you processions electronic era which has become all the world is in it and that makes you continuously with students and teachers quickly Here you require a Website so that this site covers the needs of teachers and students at one time so that it is Students special site where watching the monthly marks obtained at the school and also can request permission in the case not to go to school and that teacher who can put signs and writes reports on each student activity, duties and violin can be to the director of the school that is watching all the students and teachers in terms of absence and attendance and also can see that all the observations and monitors all complaints and reports and so in a short time and quickly.

Hence we can say that this site facilitates all administrative tasks within and outside the school with ease. Web pages will often require more screen space than is available for a particular display resolution. Most modern browsers will place a scrollbar (a sliding tool at the side of the screen that allows the user to move the page up or down, or side-to-side) in the window to allow the user to see all content. Scrolling horizontally is less prevalent than vertical scrolling, not only because such pages often do not print properly, but because it inconveniences the user more so than vertical scrolling would (because lines are horizontal; scrolling back and forth for every line is much more inconvenient than scrolling after reading a whole screen; also most computer keyboards have page up and down keys, and many computer mice have vertical scroll wheels, but the horizontal scrolling equivalents are rare). When web pages are stored in a common directory of a web server, they become a website.

A website will typically contain a group of web pages that are linked together, or have some other coherent method of navigation. The most important web page to have on a website is the index page. Depending on the web server settings, this index page can have many different names, but the most common is index.html. When a browser visits the homepage for a website, or any URL pointing to a directory rather than a specific file, the web server will serve the index page to the requesting browser. If no index page is defined in the configuration, or no such file exists on the server, either an error or directory listing will be served to the browser. A web page can either be a single HTML file, or made up of several HTML files using frames or Server Side Includes (SSIs). 3 Frames have been known to cause problems with web accessibility, copyright, navigation, printing and search engine rankings, and are now less often used than they were in the 1990s.

Both frames and SSIs allow certain content which appears on many pages, such as page navigation or page headers, to be repeated without duplicating the HTML in many files. Frames and the W3C recommended alternative of 2000, the <object> tag, also allow some content to remain in one place while other content can be scrolled using conventional scrollbars. Modern CSS and JavaScript client-side techniques can also achieve all of these goals and more

When creating a web page, it is important to ensure it conforms to the World Wide Web Consortium (W3C) standards for HTML, CSS and other standards. The W3C standards are in place to ensure all browsers which conform to their standards can display identical content without any special consideration for proprietary rendering techniques. A properly coded web page is going to be accessible to many different browsers old and new alike, display resolutions, as well as those users with audio or visual impairments. Usually, Web pages today have become more dynamic. Web pages are dynamic, which is generated from the server-side when asked to do so, and then serve the end user. These types of web pages usually do not have a fixed link, or a fixed address, associated. Today, it can be seen in many popular forums, and online shopping, even on Wikipedia. This practice is designed to reduce the amount of static pages instead of storage with associated information in the database pages. Some search engines may have difficulty in indexing web pages and dynamic web pages, so it can offer static pages in those cases.

2.2 Existing technology

Educational technologies have the potential to alter greatly how schools are run and how students learn. Essential to achieving this outcome, however, is a dedicated and enthusiastic technology leader with the power to envision, articulate, and mobilize a school's population to achieve relevant technology goals. Most states require school administrators to take courses in leadership, management, and the challenges of special education; but none require administrators to be technologically competent Only when this oversight is corrected can we hope to prepare our schools and children adequately for their future. We have proposed a course outline which identifies some of the topics required to meet the needs for technology leaders. We encourage discussions and sharing of ideas by members of the educational technology. Manual processes refer to an internal process at a school or college that does not rely on people or human labor or pen and paper to be completed. Earlier, most processes in any organization, including educational institutions, were manual processes. A **good example of manual processes** is when employees file claims with the accounts department for reimbursements. This usually involves filling in the reimbursement claim form, attaching all bills and particulars, submitting it to accounts, receiving an acknowledgment of submission, following up in person or through the post, etc. before the claims are cleared.

Automated processes are merely digitized or electronic versions of the manual process that cuts down on human intervention, time is taken to accomplish this process in the usual way, and the overheads involved, such as paper and other materials. Automated processes are also self-motivated after they have been initiated, they rarely need human action until completion. Automated processes usually feature in a school management software that is being used to manage processes in the school or college.

For instance, an automated version of the example given above – employees filing reimbursement claims – will involve an employee using the school management software to request a reimbursement, sharing supporting documents electronically from their device, even if remote, and then the software processing the reimbursement once it has been approved. This process is far less cumbersome than the previous manual process. It is clear that automated processes have taken over most schools and colleges due to the inadequacies of manual processes. Below we discuss the disadvantages of manual processes that should encourage schools and colleges to allow automated processes to replace their obsolete ones:

2.3 Area of Study

Information technology (IT) is considered as one of the most fundamental forces for change in the all sectors of our lives. Today many students want to learn online and in turn get degrees from worldwide colleges and universities, but still cannot go anywhere as they live in isolated areas without proper communication systems. Consequently, many researchers encourage learning courses under the e-education system as it saves time and energy of those students staying at any far-off distant regions from the universities or colleges they have enrolled. Indeed, e-education adoption is increasing in most universities and institutions of higher learning all around the world. E-education which is also known as web-based learning, is defined as the delivery of education in a flexible and easy way through the use of internet to support individual learning or organizational performance goals. Furthermore, there are different kinds of e-learning system such as blackboard and second life. Both of blackboard and the second life systems are used for attended lecturers, do homework and so many services.

2.4 Reason of the Project

E-Education isn’t a new concept; it’s something that has been around for a couple of decades now, but it’s still not as widespread as you might think. Courses taught at school and in the workplace

are still predominantly undertaken in person, and led by a tutor or teacher. Being taught in person by a tutor does of course has its own benefits, but e-learning is an option that businesses are increasingly recognizing as one that brings lots of upsides. In this article, we're going to consider the purpose of e-learning and why businesses and other organizations choose to use it.

2.4.1 Flexibility

The flexibility of e-education is one of the reasons that businesses often prefer it over more traditional teaching methods. Sending out team members for training can sometimes take several days, which can be a significant loss of productivity to the business. The nature of e-learning courses usually means that anyone can sit down and tackle a chunk at a time. This is perfect for those who want to spread out their learning, particularly when they want to learn during work time, but when the normal demands of the job are lower. Also on the subject of flexibility is the breadth of courses on offer - many training providers offer dozens of courses from lots of different accreditation bodies, which means that e-learning technology can be used for nearly any subject.

2.4.2 Interactivity

When e-education was first popularized back in the early 90s, one of its biggest attractions was the interactivity it brought, compared with pouring over books and paperwork. This was especially attractive for children, because education material could be made more fun and enjoyable, and in many ways gamified. Now, this is a standard part of many e-learning courses. Learners can study vibrant and interesting material supported with images, animations and more, much of which can be interacted with, particularly when it comes to quizzes and assessing knowledge. The idea of this interactivity is that it keeps people engaged, ultimately ensuring that they learn more effectively.

2.4.3 Reducing cost

Many of the above points contribute to one factor that businesses in particular will like. And that's that e-learning is often a very cost-effective option, versus other types of course delivery. We've already mentioned the fact that e-learning can be done in-office during periods of downtime, and this avoids the costly expense of having members of staff out on training courses, both in terms of travel and lost productivity. The course fees themselves are often lower too, with e-learning providers not having the same outlay on staff. It is of course always important to compare options however.

2.4.4 Gathering data

Paperwork is both a hassle to manage, and not particularly effective when it comes to understanding data. Fortunately, e-learning goes a long way in remedying this. In most cases, an e-learning course will be delivered through a learning management system, or LMS, which is the e-learning software that enables the course to run. These usually come with the ability to thoroughly track information pertaining to learners and courses, which means that business leaders can very easily see how all users are progressing with course material, who has completed what, and who might need to retake lapsed certifications. Rather than having to sift through unconnected documents, all relevant information can be housed in one place.

To conclude, e-learning is all about helping businesses and other organizations to have more control over how their learners take and complete courses and certifications. It's a flexible, cost-effective way of learning, and when utilized properly, it can be a very powerful business tool too.

2.5 Objectives of the Project

Main Objective:

Build a web site that manage overall school activities through one site.

Sub Objective:

- Track student schedules.
- Hold records of the student's attendance.
- Managing student health records.
- Enrolling new students.
- Help parents to follow up to his/her Son/daughter's this software is design for multiple
- Schools and colleges.
- Through this application student's mark their attendance online
- Students and teachers accounts are also managed through it
- Covid-19 like these days, teachers can take their online exam, quiz and assignments
- Result can also provide through online for both parents and students
- This E-Education System can do all work that are the need of every educational institute performance in school.
- Help the teacher to facilitate access to parents and introduce them to the extent of deficiencies at the student process.

2.6 Methodology

Prototyping Model has been used to develop this application. The Prototyping model is a technique for quickly building a function but incomplete model of the information system. There are several kinds of prototypes but they all intend to reduce risk by building a quick and dirty replica or mockup of the intended system. It can be used to demonstrate technical feasibility when the technical risk is high. It can also be used to better understand and elicit user requirements. In either case, the goal is to reduce risk and limit costs by increasing understanding of proposed solutions before committing more resources.

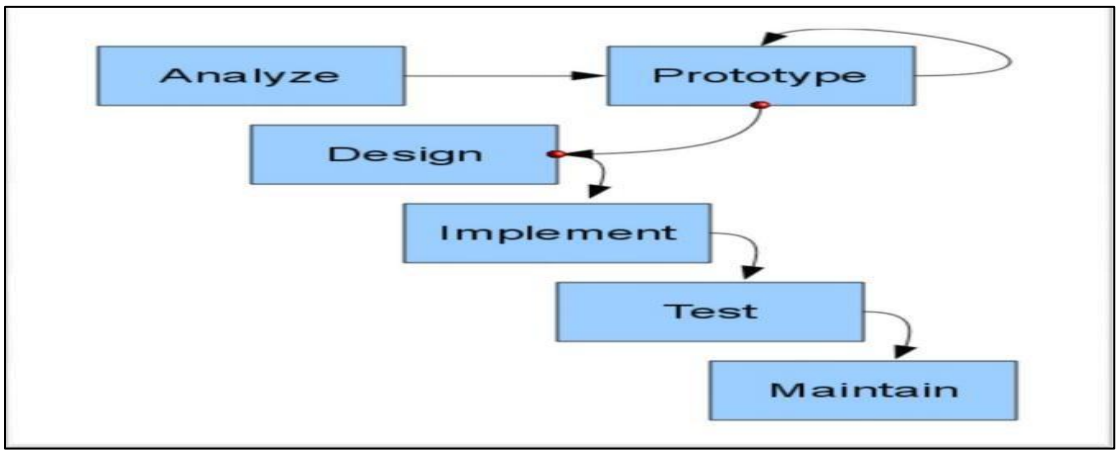

Figure 2.1: Prototype Model Process

2.7 Prototype Model

2.7.1 Advantages of Prototyping

- Reduces development time.
- Reduces development costs.
- Requires user involvement.
- Developers receive quantifiable user feedback.
- Facilitate system implementation since users know what to expect.
- Results in higher user satisfaction.
- Exposes developers to potential future system enhancements.

2.7.2 The Process of Prototyping

• **Identify basic requirement:** Determine basic requirements including the input and output information desired. Details, such us security, can typically be ignored.

• **Develop initial prototype:** The initial prototype is developed that includes only user interfaces.

• **Review:** The customers, end-users, examine the prototype and provide feedback on additions or changes.

• **Revise and enhancing the prototype:** Using the feedback, both the specifications and the prototype can be improved. This method involves a series of iterations and refinement until the prototype product is a fully working system, and the user is satisfied.

2.7.3 Reason of using Prototype Model

- Users are actively involved in the development
- Since in this methodology a working model of the system is provided, the users get a better understanding of the system being developed.
- Errors can be detected much earlier.
- Quicker user feedback is available leading to better solutions.
- Missing functionality can be identified easily
- Confusing or difficult functions can be identified Requirement's validation, Quick implementation of incomplete, but functional, applicatio

2.7.4 Phases in prototype Model

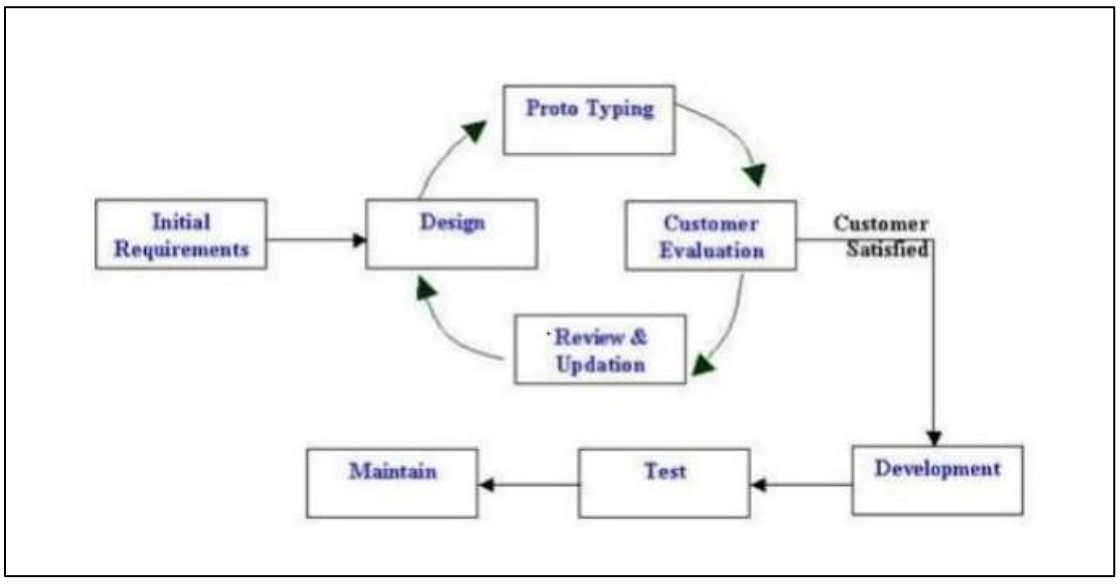

Figure 2.2: Prototype Model Phases

Phase 1: Identify some requirements to begin with: Get lists of some major requirements which define the need for the new system including the main input output information.

Phase 2: Develop initial prototype: Develop a basic initial prototype which only has UI screens.

Phase 3: Review the prototype: End users and SME's work and examine the prototype and provide feedback for improvements/enhancements.

Phase 4: Revise and enhance the prototype: Scope is changed based on feedback from end users and the prototype is enhanced and refined to accommodate user feedback.

Chapter 3 SYSTEM REQUIREMENT ANAYLSIS

3.1 Introduction

This chapter will provide a full description of the system and its users. Then it depicts the functional and non-functional requirements that have been collected using several methods from brainstorming, interview and e-surveys. After determining the most important requirements, requirement analysis was adopted using several tools such as use-case diagram, sequence diagram and activity diagram.

3.2 System description

E-school (SMS) It is a system serving the student and the teacher and parents This electronically where it will be the work of a Web application, the idea of this system to enable the student to enter the site and get a midterm marks and final exams given by the school and also the work of electronic tests through which to test himself and make himself ready for the exams at school and also keep pace with all that is happening again in the school in general

It also operates a system for parents who can follow their children through this system in terms of teacher's supervisor's names on their students' grades and monthly, as well as teacher observations own sons and students can also follow the administration of the website

And also seeing the school quota schedule for the student as well as attendance rates and absenteeism from school, where parents can see them for the student and also the daily absences for the school system, with the possibility of determining the cause of absences for each student, also for teachers and staff, and also can through the site to be communication between teachers and parents in order to follow the activities of the students inside the school.

3.3 User description

There are four main users for the proposed system; these are Admin, student, teacher and the parent. Each user can perform several different functions during the use of the system. These functions were determined according to the design of the proposed system and a user-friendly function to make the system more effective and efficient. Figure 3-1 summarizes the functions performed by each user.

3.3.1 Admin

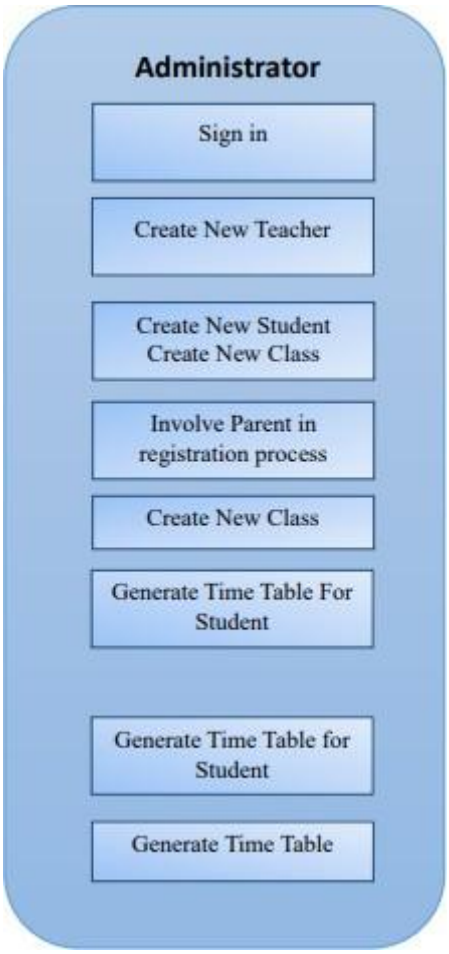

Figure 3.1: Admin Rules

As shown, the admin can Create New Teacher and Create New Student and Involve Parent in registration process and Create New Class and Generate Time Table for Student and Generate Time Table for Teacher.

3.3.2 Student

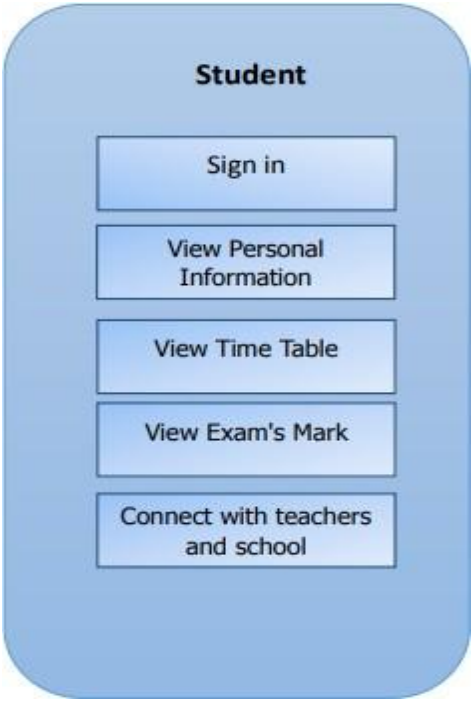

Figure 3.2: Student Rules

As shown, the student can View Personal Information and View Time Table and take Exam's and View Mark and Connect with teachers and school management System.

3.3.3 Teacher

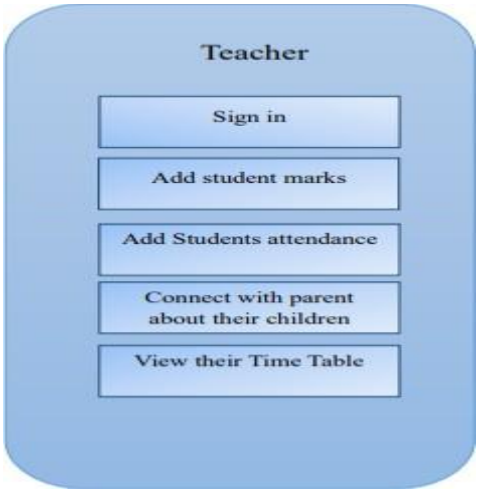

Figure 3.3: Teacher Rules

As shown, The Teacher can add student marks And Add Students Attendance and Connect with parent about their children And View their Time Table.

3.3.4 Parent

Figure 3.4: Parent Rules

As Shown, The Parent can sign in And View Report about her child And Connect with Teachers, school Management and another parent.

3.4 System Requirement

Before creating any website or a mobile App, it is necessary to visualize the layout, design and all features intended to be incorporated. In addition, how users will interact with each page and icon and how the website/App should perform (behavior, load time etc.). Requirements are the necessary attributes in the system, a statement that identifies a capability, characteristic or quality factor of the system in order to have value and utility to the users. Once the requirements are set, developers can initiate the other technical work including system design, development, testing, implementation, and operation.

For any system, there are functional and non-functional requirements to be considered while determining the requirements of the system. The functional requirements are user "visible" features that are typically initiated by stakeholders of the system, such as generate report, login,

and signup. On the other hand, nonfunctional requirements are requirements that describe how the system will do what it is supposed to do, for example, security, reliability and maintainability.

3.5 Functional Requirement

3.5.1 Admin

FN-REQ-001: Create, edit and delete student account.

FN-REQ-002: Create, edit and delete teacher account.

FN-REQ-003: Create, edit and delete parent account.

FN-REQ-004: Publish news for users (Teacher, Student, and Parent).

FN-REQ-005: Store, edit, delete, calculate and print student's grade.

FN-REQ-006: Add Classes and Subject to the teachers.

FN-REQ-007: Change user information.

FN-REQ-008: Search student's grade per name and per ID.

FN-REQ-009: Create, edit, delete and print timetable.

3.5.2 Teacher

FN-REQ-010: Add Student's marks per Subject.

FN-REQ-011: Add Student's attendance per Subject.

FN-REQ-012: Connect with student and parent.

FN-REQ-013: Publish news for users (Admin, Student, and Parent).

FN-REQ-014: Add Questions to Questions Bank.

FN-REQ-015: Add Activity To another Teacher.

FN-REQ-016: Add Activity to The Admin.

3.5.3 Student

FN-REQ-017: View their marks per subject.

FN-REQ-018: Ask their teacher and the admin

FN-REQ-019: View Question Bank per subject.

FN-REQ-020: Publish news for users (teacher, parent and admin)

FN-REQ-021: Change their account's information.

3.5.4 Parent

FN-REQ-022: View the marks of their children.

FN-REQ-023: View the attendance of their children.

FN-REQ-024: Publish news for users (Student, Teacher, and Admin).

FN-REQ-025: Change their account's information.

3.6 Non-Functional Requirement

3.6.1 Security

NF-RQ-001: The system has accounts for its users and only authorized users can access the system with username and password.

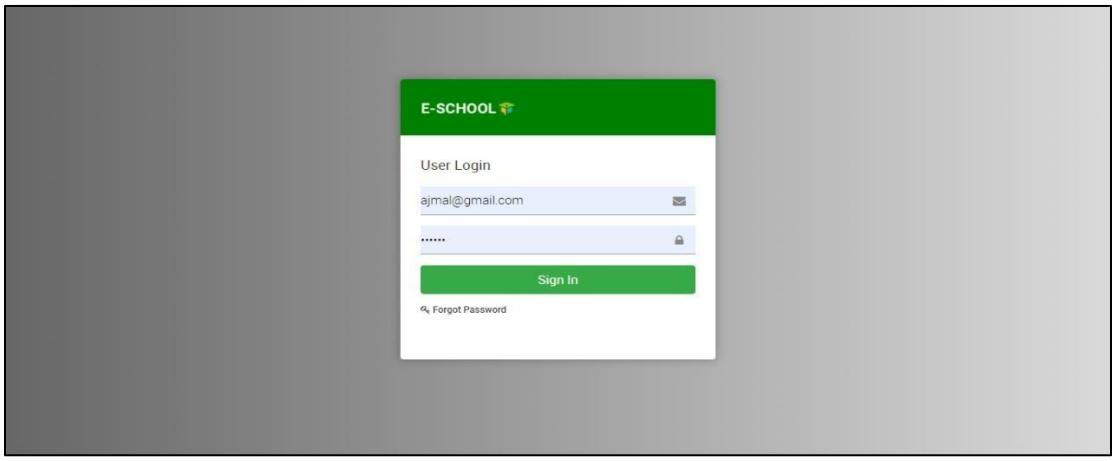

Figure 5: user login interface

3.6.2 Performance

NF-RQ-002: Easy tracking of records and updating can be done.

3.6.3 Availability

NF-RQ-003: The system is available to users anytime, anywhere, just need a PC and Internet Connection.

NF-RQ-004: Also, the system work in multiple web browsers like (Chrome, Mozilla, Opera, and Internet Explorer).

3.6.4 User Friendly

NF-RQ-005: The system has a friendly user interface and the system very interactive.

3.7 Hardware Requirements

PC Requirements

- Core 2 Duo or Dual Core

Interactive Screen

- Bio Matric Device (Optional)

- Symbian Mobile phone or Messaging Mobile phone (To send Messages / Communication)

3.8 Software Requirement

- Window 7, Window 8, Window 10 and Advance
- All necessary Devices
- Xampp service (for Offline deployment)
- Live Hosting for Domain (for Online deployment)

Chapter 4 SYSTEM DESIGN

4.1 Use Case Descriptions

Sr. No	USE CASE ID	USE CASE NAME	PRIMARY ACTORS
1	UC-1	Log In	Teacher, Student, Parent
2	UC-2	Sign Up	Student, Parent
3	UC-3	Forget Password	Teacher, Student, Parent
4	UC-4	Log Out	Teacher, Student, Parent
5	UC-5	View Profile	Teacher, Student, Parent
6	UC-6	Edit Profile	Admin, Teacher, Student, Parent
7	UC-7	View Notice Board	Teacher, Student, Parent
8	UC-8	Entry the Attendance	Admin, Teacher
9	UC-9	View Attendance Report	Admin, Teacher, Student, Parent
10	UC-10	Take Online Class	Student
11	UC-11	Take Online Exam	Student

Table: 4.1

UC-1 for Login

UC-1 Login	
Summary	User already register in this application with the help of administration to perform this task.
Priority	Essential
Use Frequency	Whenever the user wants to log out.
Direct user	Admin/Teacher/Student/Parent
Main success	1. Visit the login page.
Scenario	2. Click to login as a user. 3. Enter identify information: Email and Password. 4. Click on login. 5. Login.
Alternative scenario	N/A

Table: 4.2

UC-2 for Sign Up

UC-2 Register as a new user Sign up	
Summary	User needs to register themselves in this application with the help of administration.
Priority	Essential
Use Frequency	Once a time

Direct user	Student/Parent
Main success	1. Visit the login page.
Scenario	2. Click to register as a new user. 3. Enter identify information: Name, Email id, Registration number, Password (twice), upload a picture. 4. Submit the form. 5. Check the email. 6. Login.
Alternative scenario	N/A

Table: 4.3

UC-3 for Forget Password

UC-3 Forget Password	
Summary	User can change the password
Priority	Expected
Use Frequency	Rarely
Direct user	Teacher/Student/Parent
Main success scenario	1. Go to the login page. 2. Login by student. 3. Go through the change password button. 4. Write the old one. 5. Write the new one (twice). 6. Submit.
Alternative scenario	N/A

Table: 4.4

UC-4 logout

UC-4 **Log Out**	
Summary	The user clicks on “Logout” and their session is terminated.
Priority	Essential
Use Frequency	Whenever the user wants to log out.
Direct user	Teacher/Student/Parent
Main success	1. Visit the logout page.
Scenario	2. Click to setting icon. 3. Click on logout. 4. Logout.
Alternative scenario	N/A

Table: 4.5

UC-5 View Profile

UC-13 View the profile	
Summary	User can view their own profile
Priority	Expected
Use Frequency	Often

Main success scenario	1. Go to the login page. 2. Login by teacher. 3. View their profile.

Table: 4.6

UC-6 Edit Profile

UC-5 Edit the profile	
Summary	User can edit their own profile
Priority	Expected
Use Frequency	Rarely
Main success scenario	Go to the login page. Login by teacher. Go through the edit button. Edit your profile. Submit.

Table: 4.7

UC-7 View Noticeboard

UC-07 View Noticeboard	
Summary	Only teacher and teacher can create notice.
Priority	Expected
Use Frequency	Often
Direct actors	Teacher, Student, Guardian

Main success scenario	1. Go to the login page. 2. Login by yourself. 3. New notification can be seen front on the page.

Table: 4.8

UC-8 Entry the Attendance

UC-01 Entry the attendance	
Summary	Only teacher can entry student attendance.
Priority	Essential
Use Frequency	Once a time
Direct actors	Teacher
Main success scenario	4. Go to the login page. 5. Login by yourself. 6. Entry student attendance. 7. Check the attendance. 8. Update the attendance.
Alternative	1. If any student cannot give his/her attendance that time,

Table: 4.9

UC-9 View Attendance Report

UC-02 View attendance report	
Summary	View the attendance report of student.
Priority	Essential
Use Frequency	Often

Direct actors	Admin, Teacher, student and guardian
Main success scenario	1. Go through the login page. 2. Open the view attendance report. 3. View the attendance report. 4. Download the report.
Alternative scenario	N/A

Table: 4.10

UC-10 Take Online Class

UC-01 Take Online Class	
Summary	Only teacher can create online class and student can take the class.
Priority	Essential
Use Frequency	Every Time
Direct actors	Teacher, Student
Main success scenario	1. Go to the login page. 2. Login by yourself. 3. Check class schedule. 4. Take your online class.
Alternativ escenario	N/A

Table: 4.11

4.2 Use Case-Fully Dressed

This part contains the analysis of the functional and non-functional requirements using use-case diagrams, and use-cases details.

4.2.1 Admin

The Admin can do After Login process the following function as shown in figure

- Add Teacher include (Modify/Delete).
- Add Student include (Modify/Delete).
- Add Parent include (Modify/Delete).
- Add Class include (Modify/Delete).

4.2.2 Student

The student can do After Login process the following function as shown in figure

- View Personal Information.
- View Timetable.
- View Courses Marks.
- View Personal Details.

4.2.3 Teacher

The Teacher can do After Login process the following function as shown in figure

- Add Attendance include (their Marks).
- Student's Marks.
- Modify or delete mark.

4.2.4 Parent

The Parent can do After Login process the following function as shown in figure

- Generate Report.
- Show their child attendance.
- Show their child marks.

Use Case-Fully Dressed

Chapter 5 IMPLEMENTATION & TESTING

5.1 Testing

Software testing is defined as an activity to check whether the actual results match the expected results and to ensure that the software system is defect free. It involves the execution of a software component or system component to evaluate one or more properties of interest. Software testing also helps to identify errors, gaps, or missing requirements in contrary to the actual requirements.

5.2 Software Testing Types

5.2.1 Manual Testing:

Manual testing is the process of testing software by hand to learn more about it, to find what is and isn't working. This usually includes verifying all the features specified in requirements documents, but often also includes the testers trying the software with the perspective of their end users in mind. Manual test plans vary from fully scripted test cases, giving testers detailed steps and expected results, through to high-level guides that steer exploratory testing sessions. There are lots of sophisticated tools on the market to helps with manual testing, but if you want a simple and flexible place to start, take a look at Test pad.

5.2.2 Automation Testing:

Automation testing is the process of testing the software using an automation tool to find the defects. In this process, testers execute the test scripts and generate the test results automatically by using automation tools. Some of the famous automation testing tools for functional testing are QTP/UFT and Selenium.

5.3 Testing Methods / Techniques

Once source code has been generated, software must be tested to uncover as many errors as possible before delivery to the client. Which is a very important to work the system successfully and achieve high quality of software. Testing includes designing a series of test cases that have a high likelihood of finding errors. Software testing is a critical component of the software engineering process. It is an element of software quality assurance (SQA). System testing makes logical assumptions that if all the parts of the system are correct, the goal will be successfully achieved. The system should be checked logically. Validations and cross checks should be there.

Avoid duplications of records that cause redundancy of data. This system is tested by the following steps and prepared for the final implementation.

5.3.1 Unit Testing

Using black box testing technique Android app are tested unit by unit for whether they receive Input properly and give output in proper format. It is also tested that the error message is properly displayed and give user-friendly information. Each module contains pictures, Buttons, and processing elements etc. An addition to Unit testing is User Interface (UI) tests. These tests relate to UI components of your target application. UI tests ensure that your application return the correct UI output in response to sequence of user actions on device.

5.3.2 White Box Testing:

White box testing is testing case design method that uses the control structure of the procedural design test cases. Using white box testing methods, one can devices test cases that

- Grantees that all independent paths within a module have been exercised at least once.
- Exercise all logical decision on their true and false sides.
- Exercise all loops at their boundaries and within their operational bounds.
- Exercises internal data structure to ensure their validity.

5.3.3 Integration Testing:

We have used top-down testing strategy for integrating modules. The separately modules will be integrated and for checking that they work properly after their integration, tests will be conducted to ensure their proper functionality. After that regression testing strategies help us to ensure that changes do not introduce unintended behavior or additional errors.

5.4 Test cases for each module / function:

Test causes means test your project in external person. Those people check your entire module one by one and find the errors and want to correction of your mistakes. If any module is not working then here easily to check their errors. So, it is very important to check all the modules before the test cases. Test cases are formal examination designed to validate certain functionality from the legacy system that should be preserved in the migrated application.

5.5 Test Life Cycle:

Software Testing Life Cycle refers to a testing process which has specific steps to be executed in a definite sequence to ensure that the quality goals have been met. In STLC process, each activity

is carried out in a planned and systematic way. Each phase has different goals and deliverables. Different organizations have different phases in STLC; however, the basis remains the same. Below are the phases of STLC:

- Requirement's phase
- Planning Phase
- Analysis phase
- Design Phase
- Implementation Phase
- Execution Phase
- Conclusion Phase
- Closure Phase

TC-1: Against Login

Test Suite ID:	TS-1
Test Case ID:	TC-1
Test Case Name:	Against Login as a user
Test Case Date	06-06-2021
Test case Engineer	Ifra Mubarik
Test Case Summary:	Verify the application can work against Login command
Environment	Computer Windows 7 to onward

Hardware Required	Core 2 Duo or Dual Core
Software Required	Windows 7, Window 10 and Advance window
Methods	• Open Application. • Click the Login button • Put the data in required fields. • If you put invalid email this will show error. • If you put wrong password, system will generate message to write correct Email or Password. Login successfully.
Comments	Passed

TC-2: Against Admission Requirement

Test Suite ID:	TS-2
Test Case ID:	TC-2
Test Case Name:	Against Admission Requirements
Test Case Date	08-06-2021
Test case Engineer	Ifra Mubarik
Objective	Verify the application can work against Admission requirements

Environment	Computer Windows 7 to onward
Hardware Required	Core 2 Duo or Dual Core
Software Required	Windows 7, Window 10 and Advance window
Methods	• Open Application. • Click on Student Information • Select Student Admission • Put the data in required fields. • If you don't put data in required field this will show error. • System will generate message to write the related data in the field then admission successfully Added.
Comments	Passed

TC-3: Against Admission Enquiry

Test Suite ID:	TS-3
Test Case ID:	TC-3
Test Case Name:	Against Admission Enquiry
Test Case Date	07-06-2021

Test case Engineer	Ifra Mubarik
Objective	Verify the application can work against Admission Enquiry
Environment	Computer Windows 7 to onward
Hardware Required	Core 2 Duo or Dual Core
Software Required	Windows 7, Window 10 and Advance window
Methods	• Open Application. • Click on Front Office • Select Admission Enquiry • Put the data in required fields. • If you don't put data in required in any one of the fields • Then the System will generate message to write the related data in the field that is empty. • Then you can check the desire data.
Comments	Passed

TC- 4: Against Examination Setup

Test Suite ID:	TS-4
Test Case ID:	TC-4

Test Case Name:	Against Examination Setup
Test Case Date	12-06-2021
Test case Engineer	Ifra Mubarik
Objective	Verify the application can work against Examination Setup
Environment	Computer Windows 7 to onward
Hardware Required	Core 2 Duo or Dual Core
Software Required	Windows 7, Window 10 and Advance window
Methods	• Open Application. • Click on Examination • Select Exam Group • Put the data in required fields. • Exam group created • If you don't put data in exam group • Then further no operation is done in examination • System will generate message to write the related first in Exam group.
Comments	Passed

TC-5: Against Homework Field

Test Suite ID:	TS-5
Test Case ID:	TC-5
Test Case Name:	Against Homework Field
Test Case Date	14-06-2021
Test case Engineer	Ifra Mubarik
Objective	Verify the application can work against Homework Field
Environment	Computer Windows 7 to onward
Hardware Required	Core 2 Duo or Dual Core
Software Required	Windows 7, Window 10 and Advance window
Methods	• Open Application. • Click on Homework • Select Add Homework • Put the data in required fields. • Click on Add button • Then Homework is added for selected class
Comments	Passed

TC-6: Against Communication

Test Suite ID:	TS-6
Test Case ID:	TC-6
Test Case Name:	Against Communication
Test Case Date	10-06-2021
Test case Engineer	Ifra Mubarik
Objective	Verify the application can work against Communication
Environment	Computer Windows 7 to onward
Hardware Required	Core 2 Duo or Dual Core
Software Required	Windows 7, Window 10 and Advance window
Methods	• Open Application. • Click on Communication • Select Notice Board • Check either system shown any message? • If no notice is here then, • Click on Post New Message

	• Post a message on notice board for student and parents • System will generate message that notice is successfully created.
Comments	Passed

TC-7: Against Communication through Email/SMS

Test Suite ID:	TS-7
Test Case ID:	TC-7
Test Case Name:	Against Communication through Email/SMS
Test Case Date	17-06-2021
Test case Engineer	Ifra Mubarik
Objective	Verify the application can work against communication through Email or SMS
Environment	Computer Windows 7 to onward
Hardware Required	Core 2 Duo or Dual Core

Software Required	Windows 7, Window 10 and Advance window
Comments	Passed

TC-8: Against HR

Test Suite ID:	TS-8
Test Case ID:	TC-8
Test Case Name:	Against HR
Test Case Date	19-06-2021
Test case Engineer	Ifra Mubarik
Objective	Verify the application can work against HR
Environment	Computer Windows 7 to onward
Hardware Required	Core 2 Duo or Dual Core
Software Required	Windows 7, Window 10 and Advance window
Methods	• Open Application. • Click on Human Resource • Click on Staff Directory • Staff list is shown search a specific role

	• Then select the role is will show result against data. • Add new staff • Add data in staff field it will generate password automatically • If you can't put data in email field then the • System will generate a message fill the email field
Comments	Passed

TC-9: Against System Setting

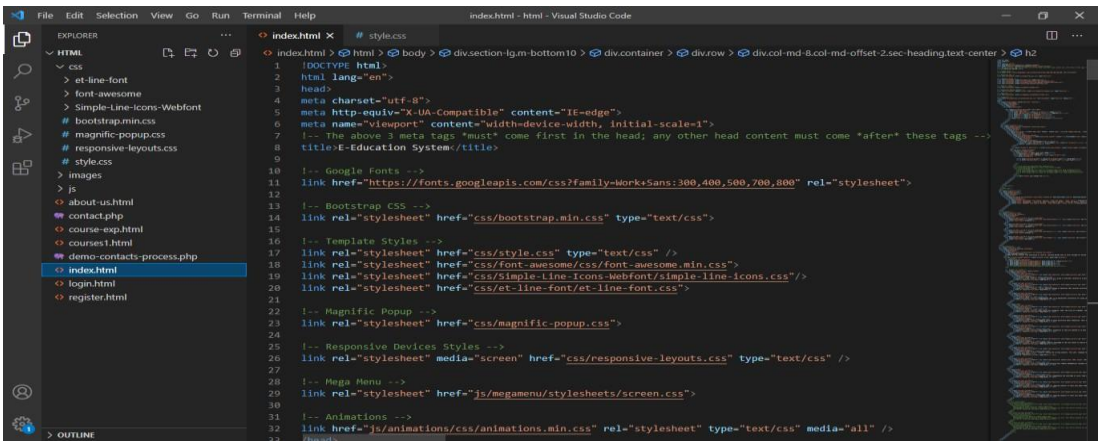

Test Suite ID:	TS-9
Test Case ID:	TC-9
Test Case Name:	Against System Setting
Test Case Date	22-06-2021
Test case Engineer	Ifra Mubarik
Objective	Verify the application can work against System Setting
Environment	Computer Windows 7 to onward
Hardware Required	Core 2 Duo or Dual Core

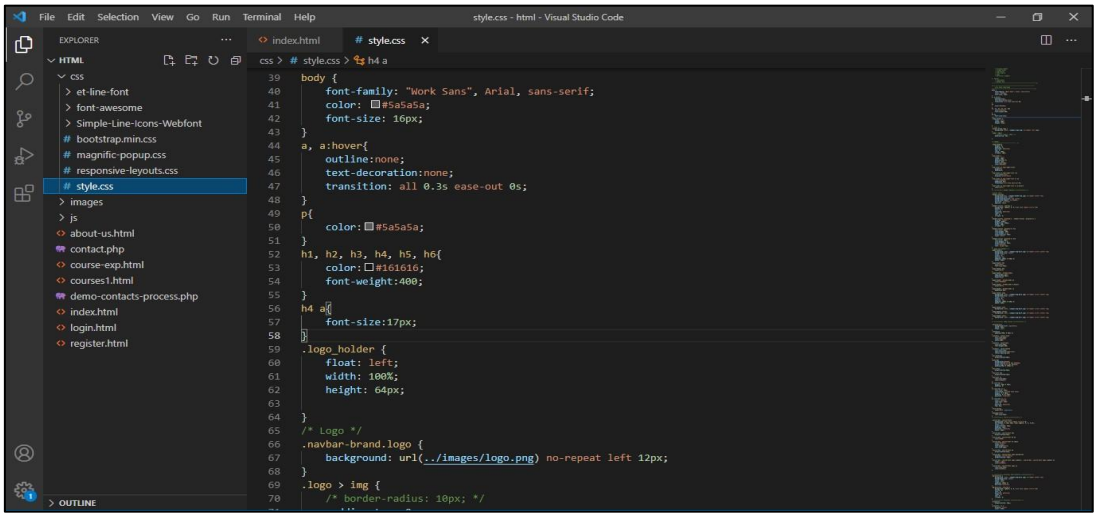

Software Required	Windows 7, Window 10 and Advance window
Methods	• Open Application. • Click on System Setting • Click on General Setting • Reset or add new data in required field • Click on save button • System will generate a message Record Successfully save.
Comments	Passed

Chapter 6 User Manual

6.1 Home Screen:

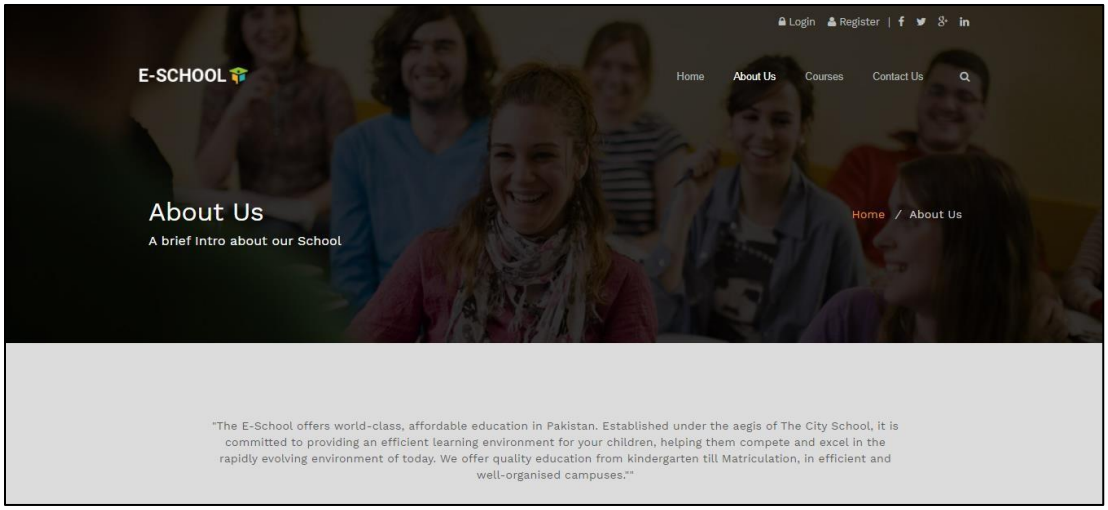

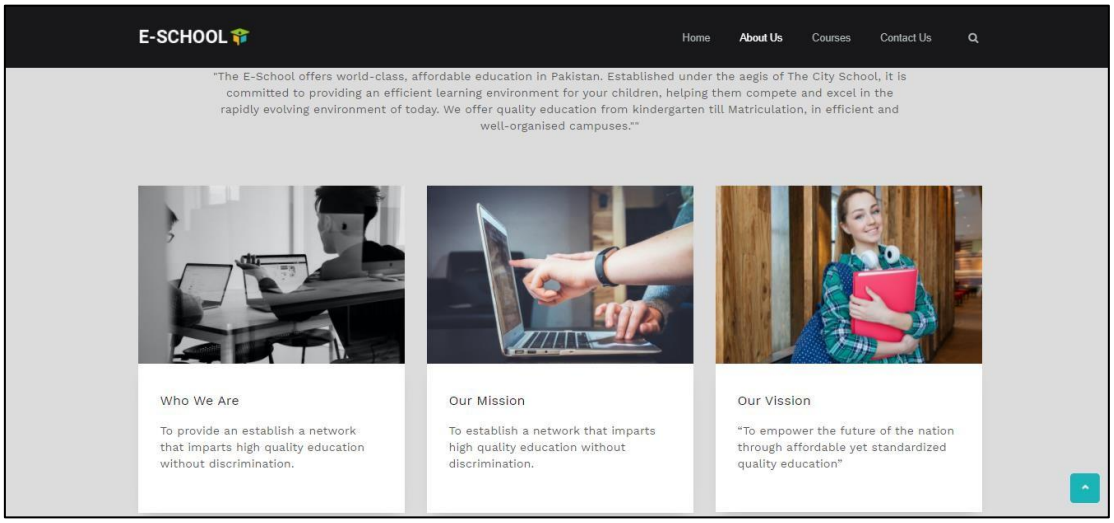

This is the home page of E – Education System Website. A home page is generally the primary web page a visitor navigating to a website from a search engine will see, and it may also serve as a landing page to Students, Viewers and parents. The **E-Education** is a technology-based teaching learning institution for preparing children for the Information Age. To achieve smarts **schools** educational objectives, these teaching and learning concepts should be covered: curricular, pedagogy, assessment and teaching-learning materials.

Here we provide a brief intro about all class of our E school which is E-Education System. Visitor can visit our school through online and can check what we providing to our student all about study, Events, Curriculum and co-curricular activities are done in the school.

6.2 About Us:

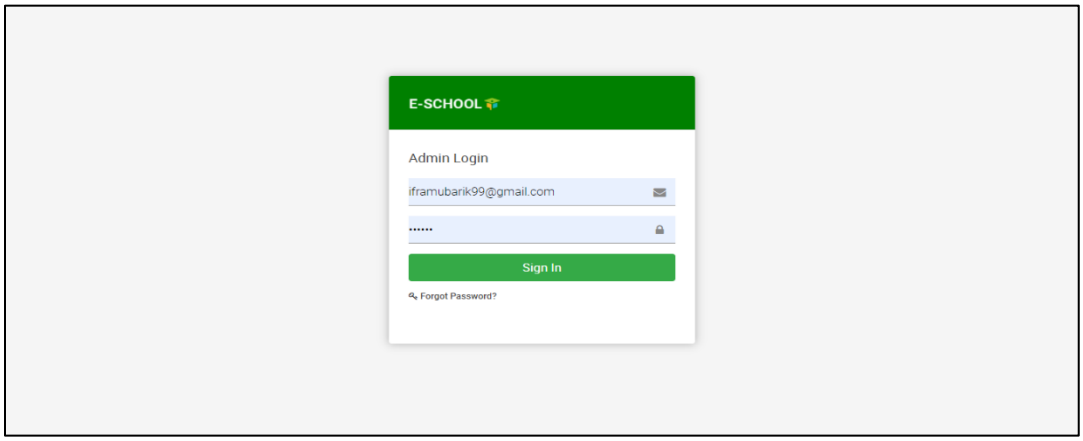

Here we provide a brief intro about our E-Education System. The **Smart School** offers world-class, affordable education in Pakistan. Established under the aegis of The City **School**, it is committed to providing an efficient learning environment for your children, helping them compete and excel in the rapidly evolving environment of today.

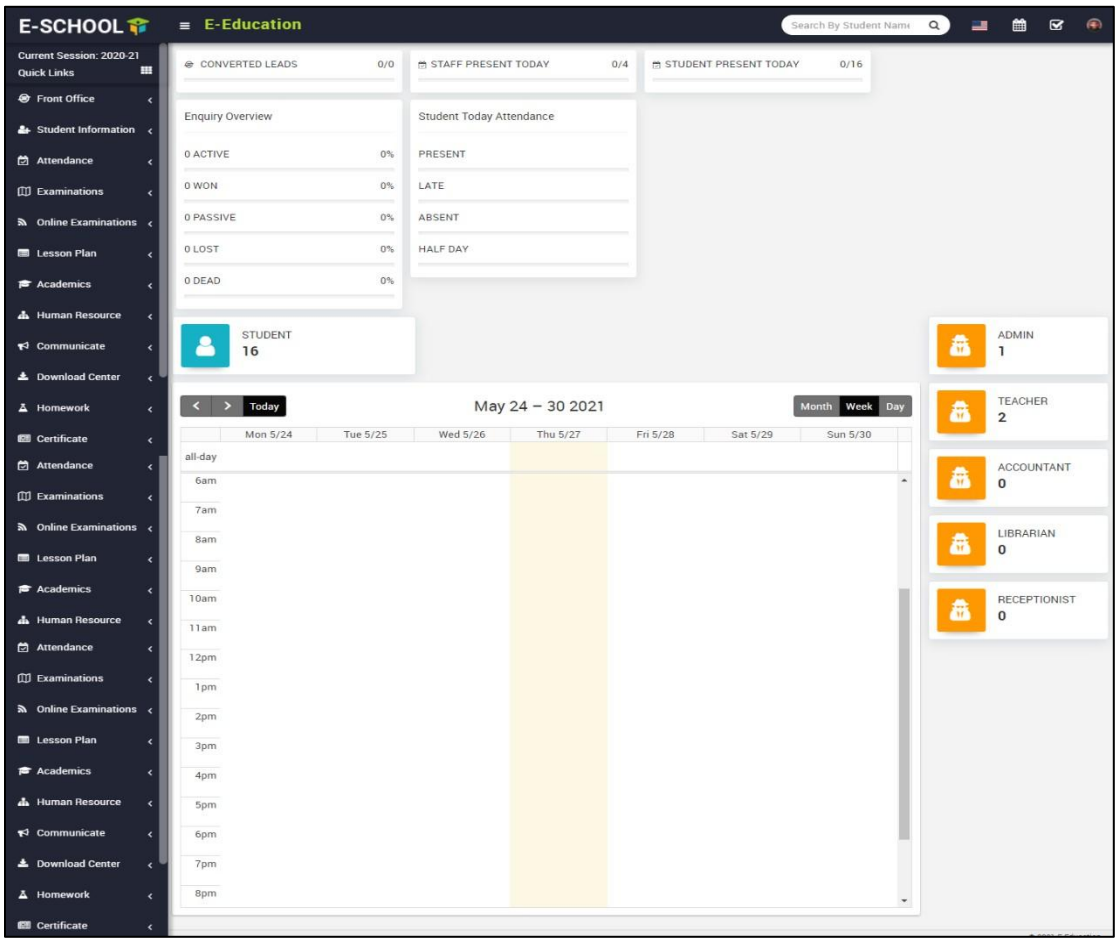

6.3 Dashboard Screen/ Admin Portion

Admin Login:

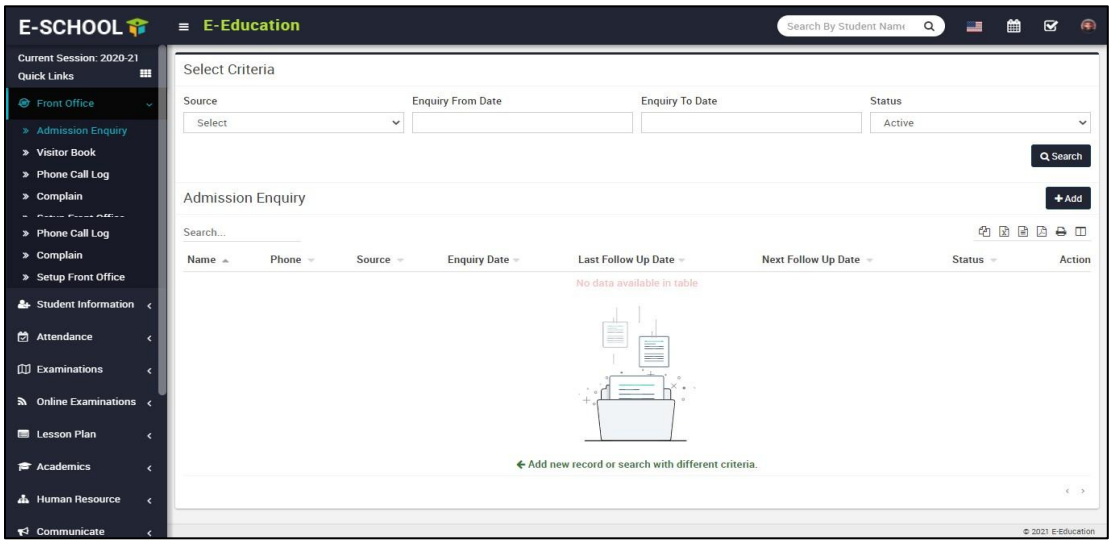

This is the Login page for Admin. Admin can login through login/site-login page

6.4 Front Office

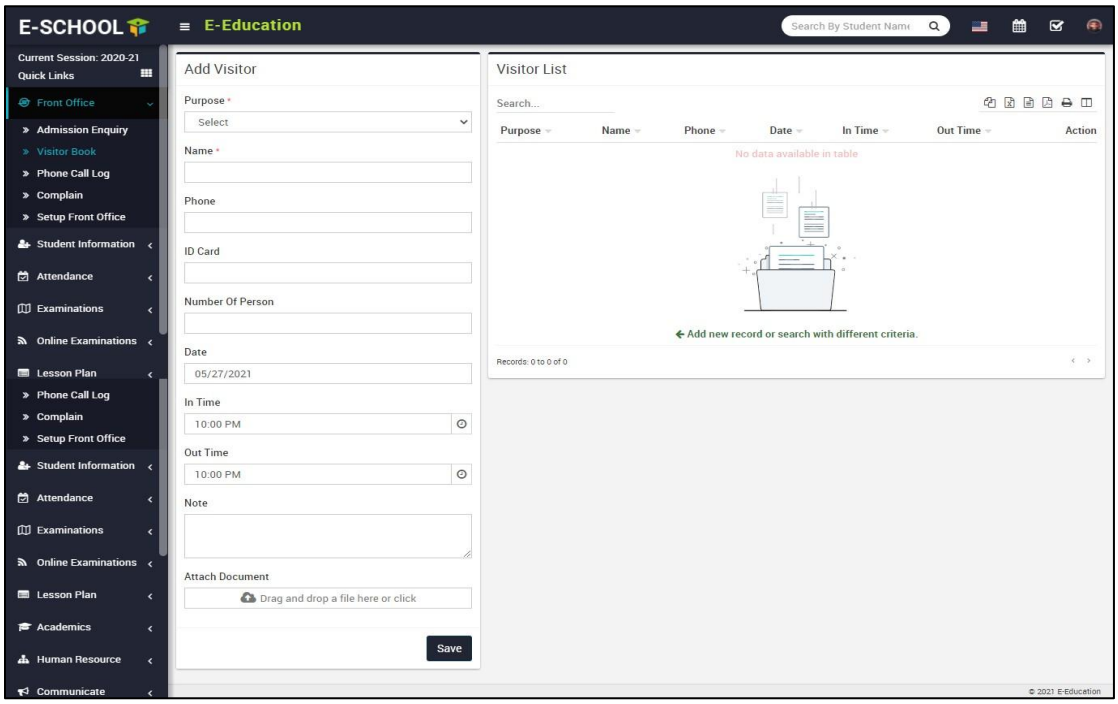

A **dashboard, in E-Education** administration, is typically the index page of the control panel for a **website's** content management system. A **dashboard** typically indicates items which require urgent actions at the top of the page, moving into less important statistics at the bottom

6.5 Admission Enquiry:

chools now face a major challenge to tackle various issues related to student management. Both parents and students are now highly conscious and want schools to deliver success to the students. There is a need for a platform that offers schools, students and parents, real-time information and here lies the value of School automation software

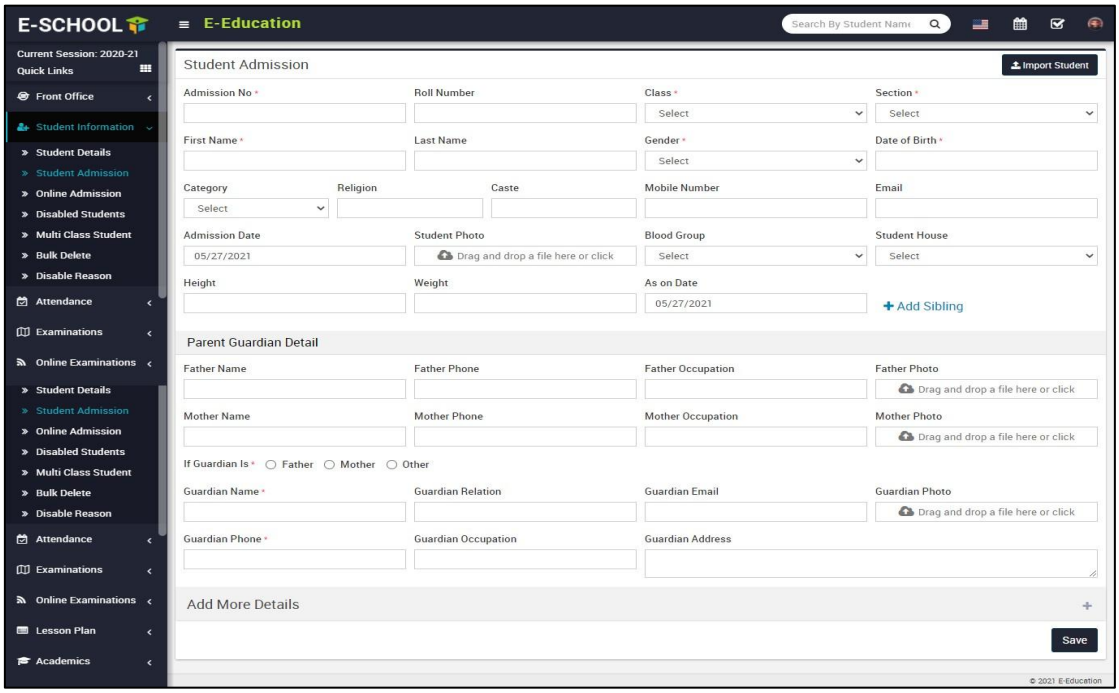

6.6 Visitor Book:

It can be a challenge to manage all the different types of **school visitors**. The **dashboard** and software programme are equally simple to operate and don't require ... anything that can be achieved with the traditional **visitor's book** or register.

6.7 Student Information

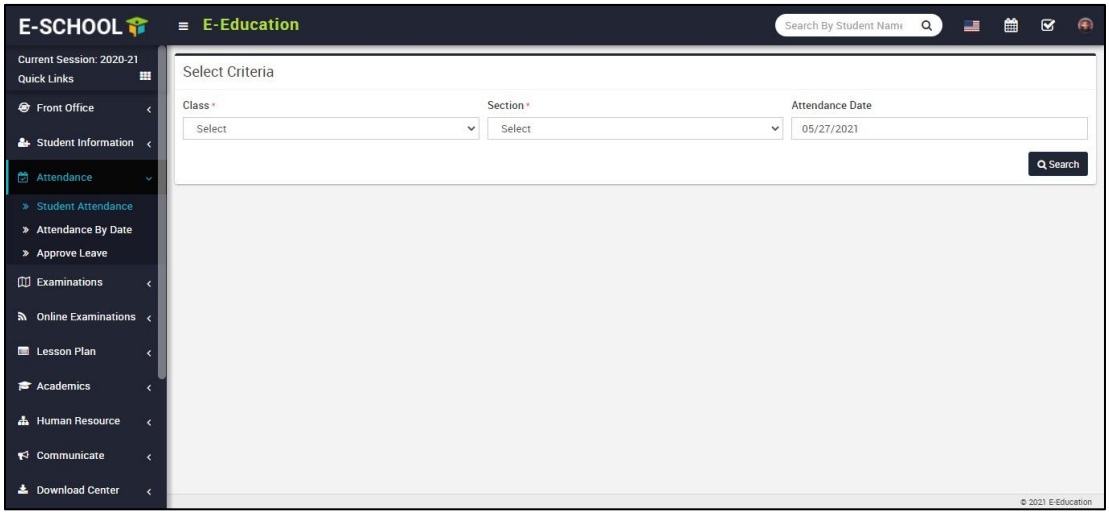

Student Admission Form:

All data is stored securely on the *school database* managed by the admin ... To develop online *student admission* system that will replace the manual method. It is an easy way to keep the record of all students.

6.8 Attendence

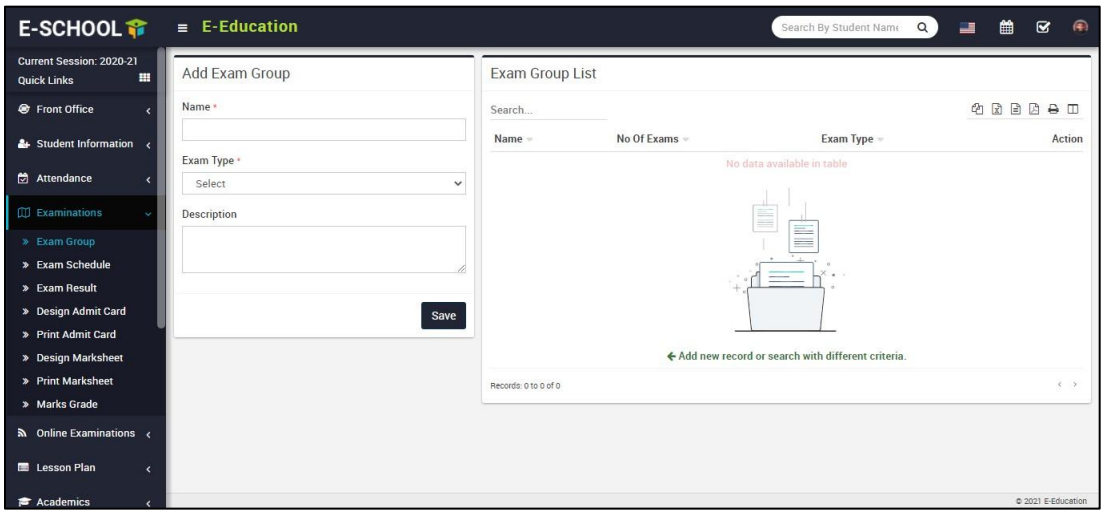

Student Attendence:

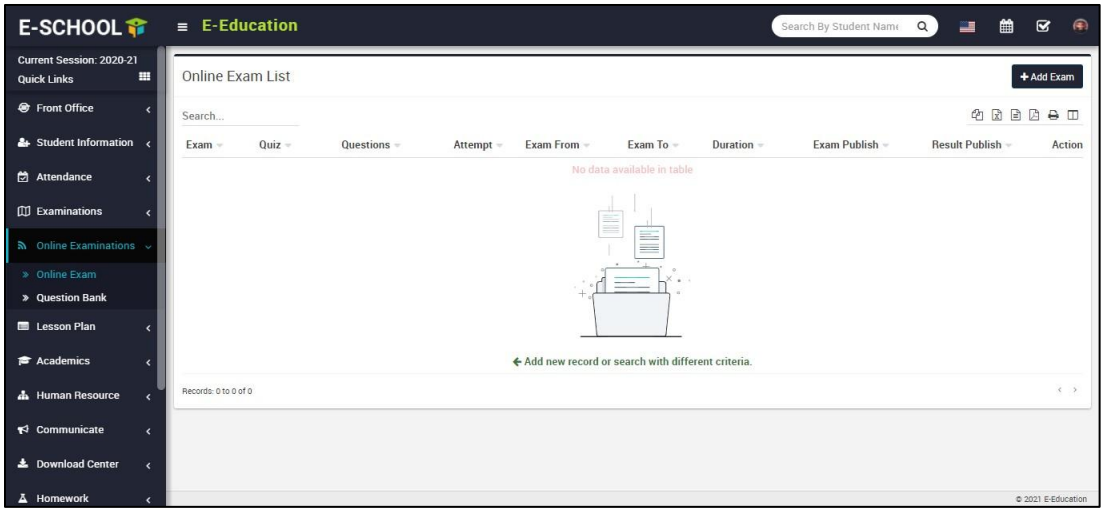

By using the attendance dashboard, teacher can easily track the attendance of a student and take necessary actions when needed.

6.9 Examinatio

Exam Group:

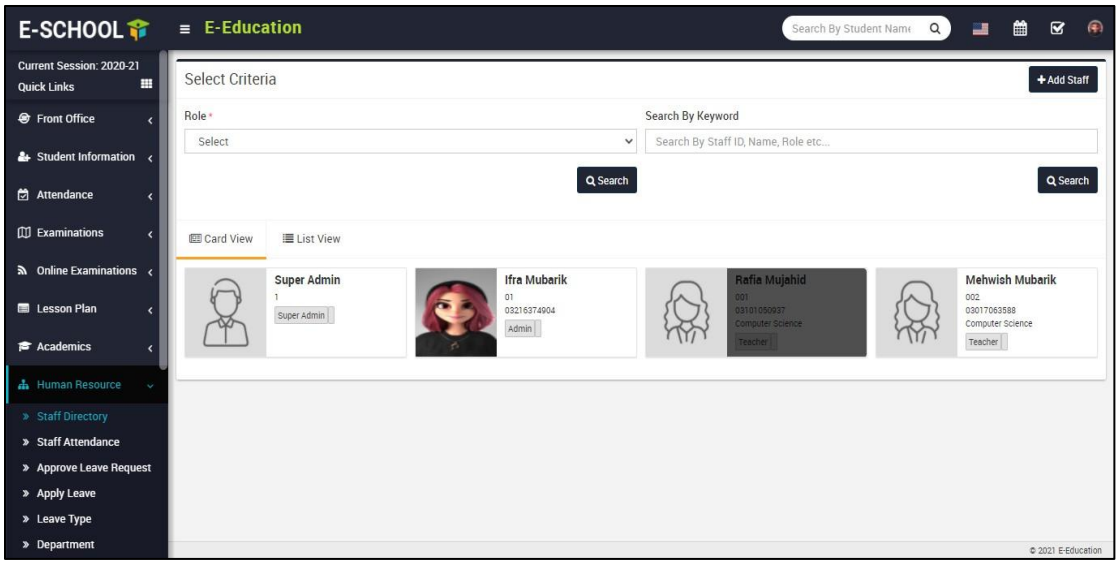

Online Exam Dashboard Analysis can be generated from the System Admin level and Branch level. When you generate the report at the system admin level, it will list the results of all students against the exam.

6.10 Human Resource

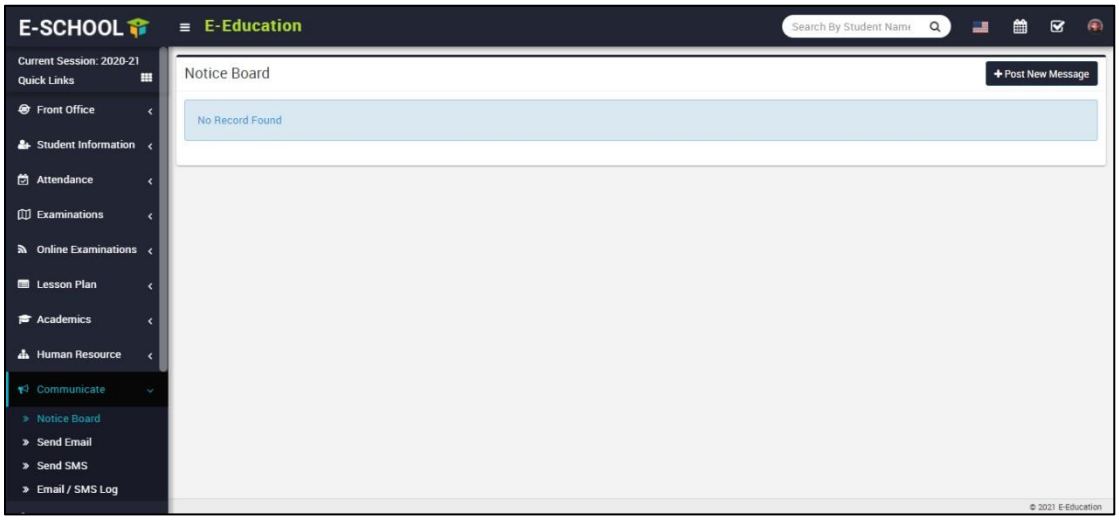

Staff Directory:

It is useful to keep the record of all staff members and their information. Staff Directory brings everything together in one place.

6.11 Communication

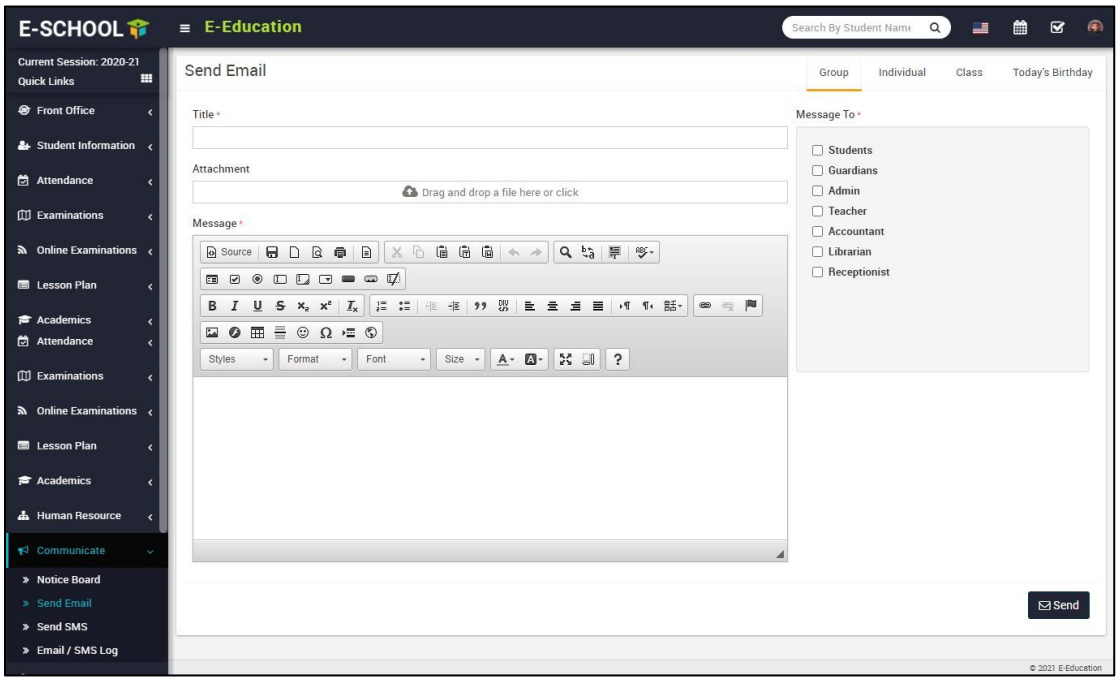

Notice Board:

Notice boards are a standard part of almost every School. Notice boards keep everyone updated on upcoming events, opportunities of all sorts and peer activities and achievements

in school. School announcements, timetables, and schedules to parents, students, and teachers tend to be the most commonly displayed.

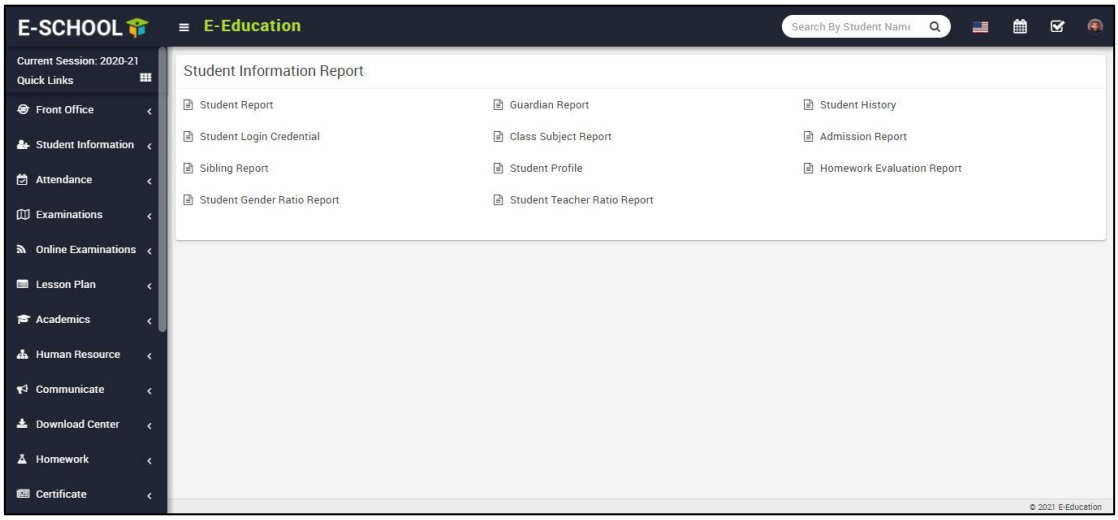

6.12 Send Email / SMS

This feature is useful to inform Parents about an important notice so that they can get any announcement through mail or sms.

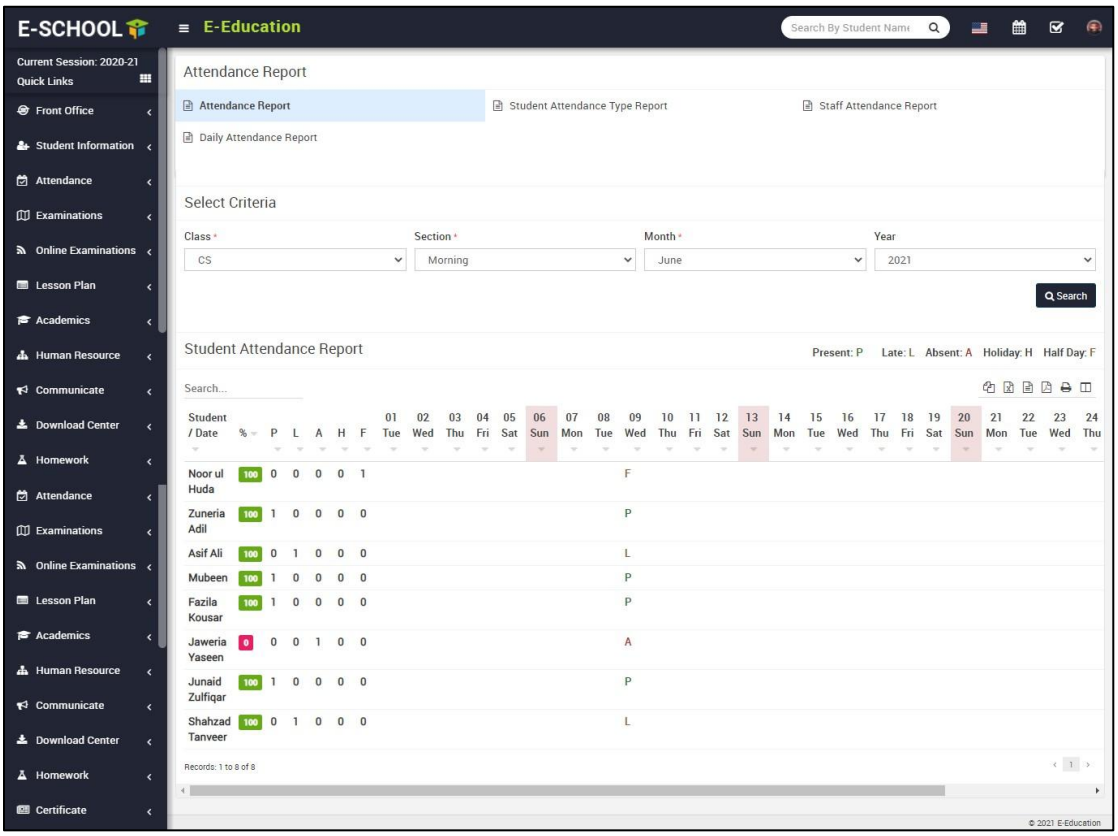

6.13 Report

Student report:

Reporting is the process of communicating information about **student** achievement and progress at a point in time. ... This section includes information to help **schools** and teachers **report** on **student** achievement and progress.

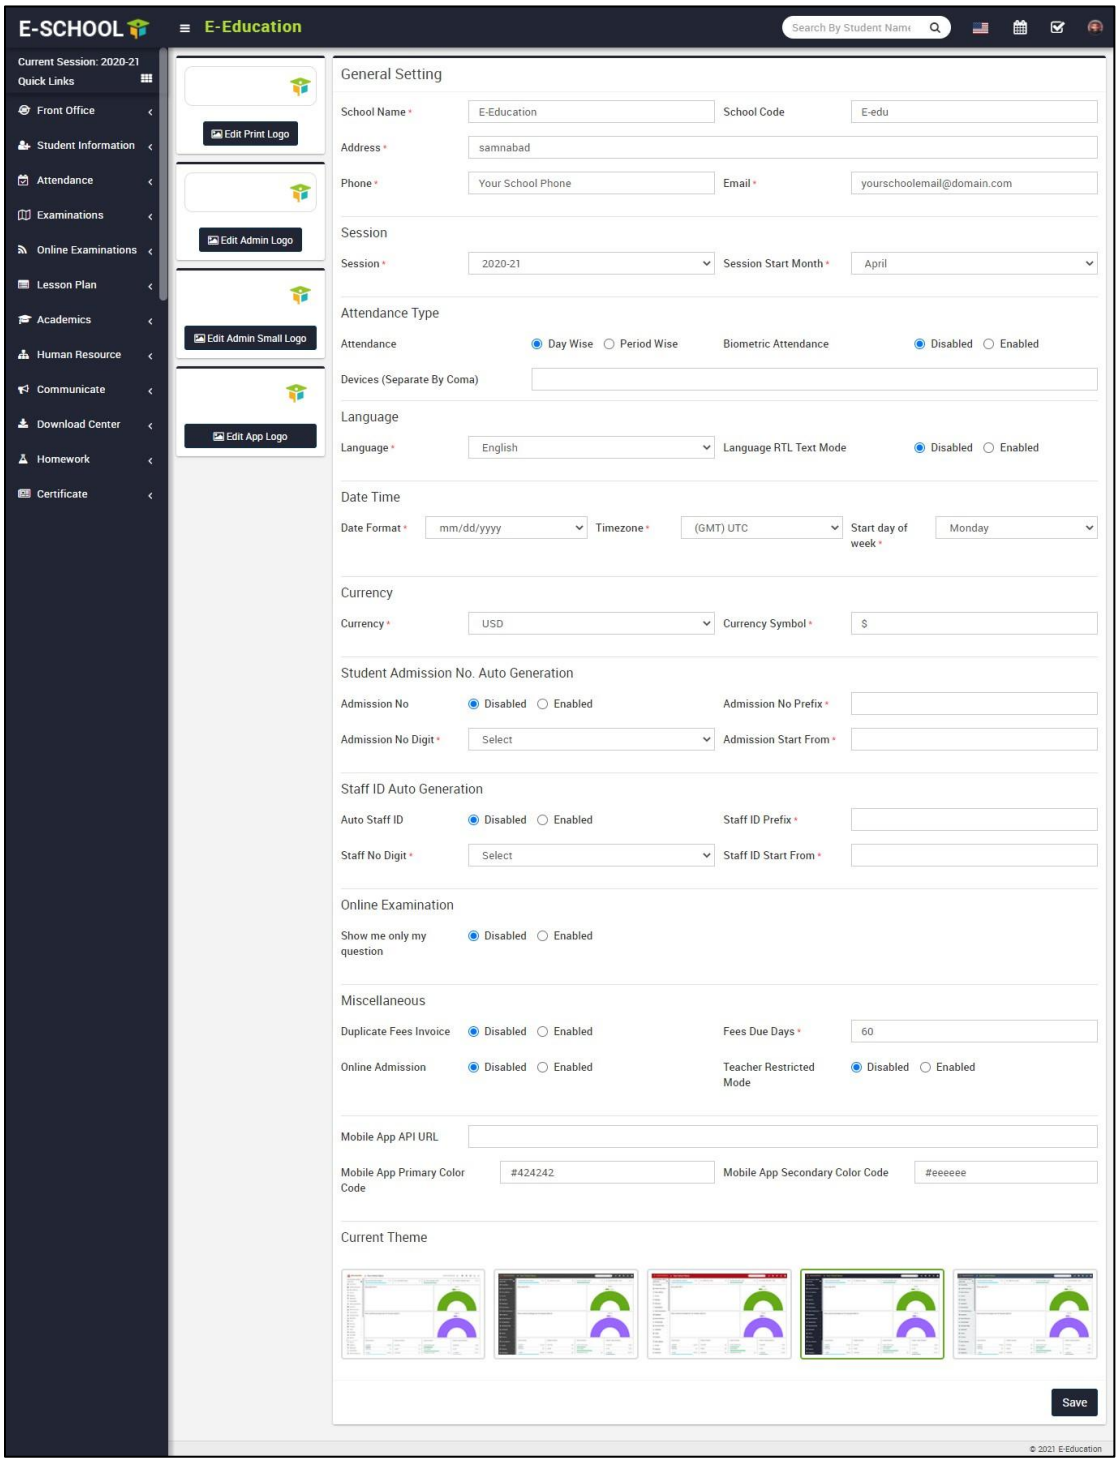

Attendence Report

The **Student Attendance Report** provides an **attendance** history for selected **student**(s), including the name of the **student**, date of **attendance**, timeslot and **class** name, and **attendance** status. If the **attendance** status is “Absent” a further note is included to designate whether or not the absence was excused.
